

# Call for Papers

## Topics

- Non-destructive Testing and Evaluation
- Analytical and numerical modeling
- Inverse problems and imaging
- Uncertainty quantification and sensitivity analysis
- Data fusion, signal processing
- Machine learning methods, surrogate modeling
- Advanced sensors
- Complex material characterization
- Monitoring and diagnoses of mechanical structures
- Innovative industrial applications

Authors are invited to submit 2-pages long (*strict, longer submissions will be rejected without evaluation*) short papers outlining the key aspects of their original and significant contribution. The authors of accepted papers will be invited to present the research work at the conference and submit a 6-page full paper.
